To whom it may concern --

In my acquaintance with Erik Uden, he has shown himself to have a singularly intense drive and fearlessness backstopped by charisma and an engaging personality that bespeaks great achievements in the future. It is difficult to talk to him for even half an hour without imagining him in a very few years explaining some outlandish breakthrough on a TED stage.

He has no hesitation about diving deep into the topics that capture his passion, and a solid grasp of the relevance of the technologies that he explores. An environment that could shape and direct his seemingly boundless drive could serve as a force multiplier, at which point it would become a matter of merely getting out of his way and seeing just how he will impact the American technological landscape.
